

**NEW ONLINE SURVEY FOR CANADIAN CLINICIANS
WORKING WITH CHILDREN WITH CEREBRAL PALSY (CP)**

Are you a Canadian rehabilitation health professional?

Do you work with children who have CP and complex communication needs (i.e., limited motor and speech function)?

If yes, we want to hear from you!

We are recruiting Canadian rehabilitation health professionals to complete a survey about their current clinical context and language comprehension assessment practices and needs with children who have CP and complex communication needs.

We also want to introduce you to a new assessment tool called the Computer-Based Instrument for Low Motor Language Testing (C-BiLLT), which is a novel tool that uses alternative access methods to assess language comprehension in children with CP.

The survey is anonymous and will take no more than 30 minutes to complete.

To access the survey, please use this link:
